

Week1

Task 1 (Easy): Salary Transformation System

Problem Description

A company stores employee salaries in a list. Increase each salary by 10% and print the updated salaries using functional transformation techniques.

Input Format

- First line contains integer N.
- Second line contains N space-separated integers.

Output Format

Print updated salaries.

Constraints

- $1 \leq N \leq 10^5$

Sample Input

```
5
1000 2000 3000 4000 5000
```

Sample Output

```
1100 2200 3300 4400 5500
```

PROGRAM:

```
package observ;  
  
import java.util.*;  
  
import java.util.stream.Collectors;  
  
public class sale {  
  
    public static void main(String[] args) {  
  
        Scanner sc = new Scanner(System.in);  
  
  
        int N = sc.nextInt();  
  
  
        List<Integer> salaries = new ArrayList<>();  
        for (int i = 0; i < N; i++) {  
            salaries.add(sc.nextInt());  
        }  
  
  
        // Increase each salary by 10%  
  
        List<Integer> updated = salaries.stream()  
            .map(salary -> salary + salary / 10)  
            .collect(Collectors.toList());  
  
  
        // Print updated salaries
```

```
    for (int s : updated) {  
        System.out.print(s + " ");  
    }  
  
    sc.close();  
}  
}
```

OUTPUT:

```
5  
1000 2000 3000 4000 5000  
1100 2200 3300 4400 5500
```
